Abstract

Work and organization increasingly happen in transit. People meet in coffee shops and write emails from their phones while waiting for buses or sitting outdoors on benches. Business meetings are held in airports and projects are run from laptops during travel. We take the street as a place where organizing in transit accumulates. While the organization studies field has been catching up with various related phenomena, including co-working, digital nomadism, and mobile and online communities, we argue that it has overlooked what has historically been the most important site for organizational activity outside of organizations. The street has been both location and inspiration for organizing, whether political, social, or governmental. It is a space of both planning and spontaneity, of silent co-existence and explicit conflict, and therefore offers abundant empirical and methodological opportunities. It is surprising that the street and the experiences it brings with it have remained largely outside the scope of organization studies. We suggest that organization scholars take to the street, and offer recommendations as to how to do so. Specifically, we explore the tensions that become apparent when organizing happens in and through the street.

Keywords

Organization studies, organizing, the street

Acknowledgements: We are grateful to Daniel Hjorth and the three anonymous reviewers for their helpful and insightful guidance in improving this essay throughout the revision process. We also thank Timon Beyes, Dennis Schoeneborn, and the members of the LOST group at Leuphana University Lüneburg for their kind and helpful feedback on earlier versions. The Research Group on Collaborative Spaces (RGCS) has provided a fruitful context for the conversations that have inspired this essay.

Introduction

The organization studies field is almost ignorant of the one place that for centuries has been the most common site for organizing: the street. On the street, people walk, talk, drive, exercise, interact, transport, trade, navigate traffic, beg, consume, fight, attack, steal, riot, protest, evangelise, and advertise. People increasingly also use the street to conduct telephone calls and to read and compose correspondence. Some listen to podcasts, conduct walking meetings, or simply enjoy the pleasure of walking to facilitate the generation of new ideas. The street, we would argue, is both a long-standing location for organizational activity and a relatively new setting for the contemporary organization of work.

We also argue that inherent in the historical development of the street is a tension that is frequently encountered in our field at large. In Europe, for example, the street, both as a physical setting and as a concept, has been something that must be controlled or managed, as well as a space that facilitates the unexpected and spontaneous. The Roman Empire introduced infrastructure to mobilise armed forces and resources through its territories, making roads a constructed indicator of control. At the same time, people have also constructed their own experiences of their surroundings. During the medieval period, people's sense of belonging centred not on cities or boroughs, but rather on sites such as castles, churches, and cemeteries (Guerreau, 1986; Mazel, 2016). Space was experienced as a set of poles and places to be transversed in time (Guerreau, 1986). In fact, the word *spatium* emerged in the Middle Ages and indicated a lapse in time (Mazel, 2016).

A good example that illustrates how streets reflect both attempts at control and the freedom of experiencing space is provided by the *traboules* of Lyon, France. *Traboules* are medieval short cuts, which emerged between the fourth and fifteenth centuries in Lyon's Saint-Jean neighbourhood. During this time, the city experienced a shift in how space was managed, with streets and other passages transitioning from shared spaces to either public or private

1
2
3 spaces. The word *traboule* comes from the Latin *transambulare*, meaning ‘to move through’
4 (Blanchard, 2011), the word itself already indicating an action or an experience. *Traboules* were
5
6 antidotes to the top-down approach to organizing space, as a *traboule* ‘does not follow the logic
7
8 of the city, avoids official roads, royal streets or long detours. A *traboule* links shores,
9
10 establishes bridges, short-cuts the city, and links parallel streets which, for geometrical reasons
11
12 should never meet’ (Marmande, 1985, p. 107). *Traboules* are liminal spaces, in the sense that
13
14 they were neither private property nor under the city’s jurisdiction. They are shared but not
15
16 public. Those who use them—local merchants then, tourists now—are permitted to move
17
18 through, but cannot claim ownership.
19
20
21
22
23

24
25 The short history of the *traboule* exemplifies the ambiguous status of many types of
26
27 urban space which, over time, fluctuated between public, private, and somewhere in between.
28
29 Streets are for shared use, but the extent to which people can claim access or ownership depends
30
31 on current regulations, as well as the identity and status of the individual in question. Processes
32
33 of exclusion (subtle or explicit, formal or informal) define the street, as do claims to its shared
34
35 nature. Interestingly, the tension between formal, organized space (for example, royal and
36
37 Roman roads) and shared, informal space (Lyon’s *traboules*), is also evident in the etymologies
38
39 of the different words for street. The English word ‘street’ comes from the Old English *stret*,
40
41 or *stræt*, which in turn is derived from the Late Latin *strata*, used elliptically for *via strata*: a
42
43 paved road. These origins allow us to see the street as an artefact or a tool, something created
44
45 for the purpose of guiding and managing movement. By contrast, the French word for ‘street’,
46
47 *rue*, comes from the Latin *ruga*, meaning ‘wrinkle’. *Rue* connotes not a tool, but rather an
48
49 assemblage of ways, houses, and inhabitants, wrinkling itself into an urban landscape.
50
51
52
53

54
55 Our field is also characterised by a continuous investigation of the relationship between
56
57 what is given and what emerges, or between organizing as a verb, and organization as a noun
58
59 (Hernes, 2014). Much like the different types of streets that exist—from the Haussmannian
60

1
2
3 boulevards of Paris, which gave the army room to manoeuvre its vehicles through the city, to
4
5 other types of historical and ever-emerging short cuts—organizing and organization embody a
6
7 continuous oscillation between that which is given or planned and the instantaneous or the
8
9 improvised. Nevertheless, organizational scholars apparently continue to favour the
10
11 comfortable quarters of furnished, centrally heated, and often privately-owned organizational
12
13 spaces. Even if our field has developed a strong interest in liminal, transitional, or boundary-
14
15 spanning places (Courpasson, Dany, & Delbridge, 2016; Shortt, 2014), these spaces still tend
16
17 to have four walls and a ceiling. Much of this may have to do with the origins of organization
18
19 theory and its focus on questions of control, confinement, and restriction (Fayol, 1919), the
20
21 minutiae of which tend to be more easily scrutinised in closed-off spaces, where variables can
22
23 be controlled and manipulated.
24
25
26
27
28

29 The street, we would argue, is an interesting focal point at which to examine the situated
30
31 nature of organizing and organization. The aim of our essay is to make explicit the constantly
32
33 changing modes of relation between organizations, organizing, and the street. We identify four
34
35 such modes: (i) organizing that takes place *on* the street, (ii) organizing *through* the street, (iii)
36
37 the organization's entry onto the street, and, finally, (iv) the street's entry into the organization.
38
39 We argue here that it is precisely the co-occurrence of *both* the symbolic (the street as a style)
40
41 and the material (the physical sites that make up urban space) that, in different ways, provides
42
43 avenues for thinking through the relationships between the organization, organizing, and
44
45 outside spaces.
46
47
48
49
50
51
52

53 **The Street as a Site for Organizing**

54
55
56 The street is not unidimensional but rather acts as shorthand for open, outdoor spaces, in urban
57
58 or sub-urban environments, that are accessible to different types of users. Indeed, we concur
59
60

1
2
3 with scholars in science and technology studies, who have emphasised that common
4 conceptions of urban space should be decentred (Fariás & Bender, 2009) and that the street's
5 social aspects should be investigated in light of new developments, for instance by considering
6 how the development of new technologies such as self-driving cars can turn the street into a
7 laboratory (Marres, 2018). The ever-changing social nature of the street does not carry the same
8 meaning to everyone, as new and continuously improving connectivity allows some to turn
9 their commute into efficient work time and others to be on call as members of the precarious
10 cohort of ubiquitous service providers, such as Uber drivers (Peticca-Harris, De Gama, &
11 Ravishankar, 2018).

22
23
24 In adopting this non-essentialist and historically situated understanding of the street, we
25 can explore its relationship to organizing and organization. Returning to the work of Weick
26 (1979), the term 'organizing' connotes practices (Czarniawska 2005; 2008) and processes. It
27 has also been defined as the 'connecting of heterogeneous actors' (Hernes, 2014, p. vii) and is
28 often used with an adjective, e.g. temporary organizing (Bakker, DeFillippi, Schwab, & Sydow,
29 2016), or alternative organizing (Reedy, King & Coupland, 2016). Understood in this way, the
30 street is replete with organizing. For street vendors (Bromley, 2000; Cross, 2000), buskers
31 (Kaul, 2014; Richter, 2012), door-to-door salespeople (Harrison, Massi & Chalmers, 2014),
32 taxi drivers (Faber, 2005; Monroe, 2016), police agents (Machin & Marie, 2011; Martin, 2018),
33 postal workers (Geddes, 2005), employees of waste removal companies (Brinkmann & Tobin,
34 2001), homeless people (Balkin, 1992; Snow and Anderson, 1993), and maintenance workers
35 (Denis & Pontille, 2018), the street is an integral part of their economic activity, and the ability
36 to predict its rhythms is part of everyday organizing. Street-based work is associated with casual
37 labour as well as with illegality and danger, for example, in the drug trade (Gootenberg, 2009;
38 Ruggiero & South, 1997) and in sex work (Roche, Neaigus & Miller, 2005; Weitzer, 2009).
39 These associations are not the result of any true nature, or 'essence,' of the street, but rather
40

1
2
3 stem from the specific material qualities the street may offer, such as the preservation of
4
5 anonymity. With digital technologies accessible in the street (Powell, 2011), online platforms
6
7 and messenger services are reconfiguring much of the gig work happening on the street, giving
8
9 us the opportunity to investigate what street-based organizing means for those on either side of
10
11 these transactions, as well as for our understandings of the relationship between the street and
12
13 the organization.
14
15

16 17 18 19 20 21 **The Street as a Mode of Organizing** 22

23
24 One important way in which the street and the organization have often been thought together,
25
26 is the street's role as an integral part of political organizing, invoked in the expression 'taking
27
28 to the streets'. In a way, blocking a street at its centre impedes all movement of the city. One
29
30 need only look at the mass protests of the last and current centuries to see that political change,
31
32 an organizational endeavour, is often achieved through a presence on the street, as well as an
33
34 engagement with the street as a concept. For example, not only did the global protest movement
35
36 'Occupy Wall Street' do exactly that, but, in its spread across the globe, the Wall Street address
37
38 became a metonym for the institutions and mechanisms that the activists opposed. In fact,
39
40 during the protests that took place in Paris in 1968, the street was a place in which to gather,
41
42 but also symbolised the controlling measures put in place by those in power; we may cite, for
43
44 example, the slogan '*sous les pavés, la plage!*' ('underneath the pavement lies the beach!').
45
46
47
48

49
50 The street does not only feature as both tool and object of political protest, but it has
51
52 also played a key role in the emergence of the image of the modern, reflexive individual.
53
54 Balzac's *Ferragus*, Woolf's *Mrs. Dalloway*, Perec's *Life: A User's Manual*, Dostojevski's
55
56 *Crime and Punishment*, Musil's *The Man Without Qualities*, and many other seminal European
57
58 novels of the nineteenth and twentieth centuries have been set in urban landscapes, which has
59
60

1
2
3 associated the independently thinking individual with urban space (Tygstrup, 2007). The close
4 relationship between the street and the individual's independence is also evident in hip hop's
5 associations of the street with status and intelligence (e.g., in terms such as 'street cred' and
6 'street smart'). Further examples are myriad, such that, in many contexts, the practice of moving
7 around the city on foot immediately indicates a state of solitary reflection (Solnit, 2001).
8 Perhaps the clearest intertwining of individual creativity and street-dwelling is found in the
9 *dérive*, a technique of seemingly purposeless urban dwelling developed by the mid-20th century
10 Paris-based collective of artists and Marxist intellectuals known as the Situationist International
11 (Debord, 1956; Bonard & Capt, 2009). The tradition is currently kept alive by British literary
12 writers and artists such as Sinclair, Keiller, and Self (Coverley, 2018), and the *dérive* continues
13 to exemplify the political potential of a solitary roaming of the streets.
14
15
16
17
18
19
20
21
22
23
24
25
26
27
28

29 In response to this tradition, here have also been calls to understand the political
30 organization of the street from a non-Western viewpoint (Mbembe & Nuttall, 2008; Robinson
31 2006), or in the context of working-class immigrant communities (Whyte, 1943). Others have
32 critiqued the romanticised perspective on walking the street alone, an activity that, for many, is
33 not without risks. For example, a woman alone on the street has classically been connected to
34 promiscuity, evident in the term 'streetwalker' (Ferris, 2007). In the realm of contemporary fine
35 art, Qualmann and Sharrocks's *Walking Women* brought together female artists who engage
36 with the gendered experience of navigating the street. Numerous further examples could be
37 given, many of which emphasise that, for women, the street offers freedom as well as danger
38 (Wilson, 1992). Hence, we espouse the view that the street is not necessarily a harmonious
39 space for equal exchange and tranquil reflection, but is also the realm of agonistic encounters
40 (Mouffe, 2013), in which different and potentially conflicting social groups exist alongside each
41 other.
42
43
44
45
46
47

53
54
55
56
57
58
59
60

1
2
3 Noteworthy exceptions to the general absence of the street in our field have observed
4
5 this political or conflict-ridden aspect to the street and have, as such, recognised it as what may
6
7 be termed a ‘mode’ of organizing. In an organizational study at street level, Fernández (2017)
8
9 studied an activist movement active on the streets of Buenos Aires. Focusing on the practice of
10
11 putting roadblocks all over Argentina, the study focuses on the cooperative’s decision to move
12
13 the locus of their action back to their own neighbourhood. They normalise their resistance by
14
15 organizing the streets; for instance, by inviting a banking service to take up residency on the
16
17 main street in their area.
18
19
20
21

22 In contrast to transformative attempts, Islam, Zyphur, and Boje (2008) see in the street
23
24 the potential to preserve local culture. Their study concerns a carnival group parading in the
25
26 annual Krewe du Vieux float two weeks prior to New Orleans’ world-famous Mardi Gras
27
28 parade. The authors analyse how the Krewe du Vieux float, in which people walk or use
29
30 donkey-carts, is more in touch with the street than the institutionalised tractor-pulled floats
31
32 parading during Mardi Gras. Here also, the street is not only a setting, but the act of being on
33
34 the street (and choosing not to elevate oneself above it) is an inherent part of the point being
35
36 made, and can be read in line with earlier work on the class-dimensions of carnival (Da Matta,
37
38 1991).
39
40
41
42

43 Also drawing attention to the politics of the local, Courpasson (2017) investigates how
44
45 mundane gestures become subversive when performed in the workplace. Here, the street is a
46
47 space away from work that offers a break to people who choose to have lunch there: ‘we escape,
48
49 and we walk for five or ten minutes together to go to another place, these walking minutes are
50
51 great because we are nowhere to be controlled’ (Courpasson, 2017, p. 489;). Again, the street
52
53 is more than a setting. Walking along the street instead of the office hallways, even if only for
54
55 several minutes, can allow people to shift to a different mindset.
56
57
58
59
60

1
2
3 Furthermore, in a study of a Swedish suburb some 20 kilometres from Stockholm,
4
5 Barinaga (2016) found that the creation of mural paintings became a tool in challenging the
6
7 stigma of the area. In her study, the street is approached as a canvas for artistic murals, but
8
9 working on the street also becomes a means of ‘rearticulating the socio-spatial dynamic’
10
11 (Barinaga 2016, p. 944). Much in line with the idea of a mode of organizing, Barinaga’s study
12
13 sees public outdoor space as constitutive of a specific organizational phenomenon.
14
15
16

17
18 Other research has also revealed that the street is not merely a setting, but also acts as a
19
20 mode of organizing and forms an inherent part of the phenomenon at hand. A study of the
21
22 annual Edinburgh Fringe Festival has revealed how performance artists use different parts of
23
24 the street in the inner city, thereby constituting new types of space (Munro & Jordan, 2013).
25
26 Similarly, a study of a volunteer organization in Montréal emphasised how walking children to
27
28 school in a group challenged existing boundaries between organizations and social groups
29
30 (Plourde, Vásquez & Del Fa, 2016), while a study of a purposefully unplanned section of
31
32 pavement behind Amsterdam’s Central Station revealed how cyclists and pedestrians are
33
34 required to engage in self-organizing (Van Oorschot, 2017). While the settings and specificities
35
36 of these studies are widely varied, each concludes that the situated and embodied ways of being
37
38 on the street matter. Nonetheless, all these studies frame the street as a setting, and do not
39
40 theorise the street. We believe that framing the street as a distinctive mode of organizing is the
41
42 first step toward considering the political potential of organizing not just on, but *with* the street.
43
44
45
46
47
48
49
50

51 **Organizations Entering the Street**

52
53

54 While the previous sections have focused on instances of *organizing*, we also observe an
55
56 increasingly busy intersection between the street and formal organizations, the latter seeming
57
58 to make it their business to enter and engage with the street. One need only look at the history
59
60

1
2
3 of jaywalking, which became a punishable offence as a result of automobile manufacturers'
4 efforts (Norton, 2007), or the ways in which commercial firms have taken up space on the street
5 through advertising. In many urban environments, billboards, posters, and animated screens
6 colonise the street in increasingly advanced ways. The street then becomes an organizational or
7 even bureaucratic space, where rules are made more visible than in any other societal contexts.
8 Traffic signs, pedestrian crossings, and speed-bumps, amongst other things, make social
9 regulations material and explicit.
10
11
12
13
14
15
16
17
18
19

20 Formal organizations, such as for-profit actors, can now also capture more of people's
21 attention and effort through their smartphones and mobile devices. Public Wi-Fi, laptops, and
22 smartphones facilitate work on the street or outside the place of work. Assembled under the
23 umbrella term 'smart city', these new technological possibilities also help governments to plan
24 the organization of cities on the levels of public transport, waste removal, or crowd control
25 (Vanolo, 2014). Citizens engage in open or critical mapping projects and community
26 architecture to regain a sense of control over their immediate urban environment (Hilgers &
27 Ihl, 2010), but such democratic or self-organized initiatives often also entail an 'infiltration' of
28 street life by more professional practices or entities.
29
30
31
32
33
34
35
36
37
38
39
40

41 Manifestations of firms on the street raise issues of locality and simultaneity that
42 question the definition of an organization by its physical location only. When an organization
43 is exposed to outdoor spaces, we observe an imbrication (Taylor & Van Every, 2011) of situated
44 encounters, actions, processes, and experiences happening outside of those practices usually
45 considered to 'scale up' (Cooren & Fairhurst, 2004) to organizations. As a result, formal
46 organizations seep through into various street-based social processes. We believe that the
47 reverse may also be observed, and wish next to discuss the increasingly 'street-like' nature of
48 some types of formal organizations. These two mirror images should be considered in relation
49 to one another, prompting us to wonder whether organizational members become more
50
51
52
53
54
55
56
57
58
59
60

1
2
3 welcoming towards street-like elements entering their organizational spaces because their
4
5 mobile devices have already allowed them to take parts of their work life outside, to the street.
6
7
8
9

10 11 **The Street Entering Organizations** 12

13
14 How are the street, its aesthetics, or its presumed principles incorporated in formal
15 organizations? Companies try to encourage more movement within the walls of their offices,
16 often through policies of hot- and flex-desking, open-plan offices, and spaces designed for
17 flexible use (Fabbri, 2016). However, we argue that organizations do not merely encourage
18 movement and encounters but also incorporate street-like features, such as mural paintings in
19 ‘street art’ fashion, benches in hallways, and food trucks and barista corners, transforming the
20 entrance halls and foyers of companies into landscapes that evoke street life.

30

31 We also think that, with some imagination, the metaphor of the street may be extended
32 to encompass the ongoing flexibilisation of labour. In many countries, job security for highly
33 educated workers has decreased (Cappelli & Keller, 2013; Helfen, 2015; Petriglieri, Ashford &
34 Wrzesniewski, 2018), and, in particular, those who seek to execute knowledge-intensive,
35 cultural, or creative work (Hesmondhalgh & Baker 2011) are compelled to accept project-based
36 work and self-employment, leading to the emergence of what some have termed a new
37 precarious class (Gill & Pratt, 2008). While those with somewhat creative or intellectually
38 stimulating jobs may at least take pleasure in a more bohemian lifestyle (Eikhof & Haunshild,
39 2006; McRobbie, 2015), scholars have also argued that the new precariat is partially
40 characterised by boredom (van den Berg & O’Neill, 2017). The lack of permanent employment
41 opportunities within organizations has led to the emergence of work environments catering
42 specifically to independent, precarious workers, many of whom are not precarious by choice
43

52
53
54
55
56
57
58
59
60

1
2
3 flexible and creative workplaces such as co-working spaces (Gandini, 2015; Garrett, Spreizer
4 & Bacevice, 2017), business incubators (Ebbers, 2014), and creative hubs (Cnossen &
5 Bencherki, 2019) may help to conceal or reinforce inequalities (Gill, Pratt & Virani, 2019), for
6
7
8
9
10 example, by giving people the opportunity to appear content and busy in the absence of
11
12 dependable work.

13
14
15 If using the image of the street to signify the emergence of the gig-economy (Petriglieri,
16
17 Ashford, & Wrzesniewski, 2018) and the new middle-class precariat may seem too much of a
18
19 stretch, we need only consider that many urban spaces typically aimed at consumption are now
20
21 in fact populated with independent workers, carrying their laptops from café to café. This
22
23 phenomenon may be characterised as both the street entering organizations (the street being a
24
25 metaphor for casual work and informal-looking work environments catering to freelancers) and
26
27 the organization entering the streets, since freelancers may also be found conducting their work
28
29 from urban places such as parks and public benches, where practices of leisure and consumption
30
31 may co-exist alongside their working activities.

32
33
34
35
36 Although the spatial turn in organization studies (Taylor & Spicer, 2007; Van Marrewijk
37
38 & Yanow, 2010) has brought to the field greater awareness of the material, aesthetic, affective,
39
40 and symbolic elements of organizational spaces, to date, no investigation has examined the
41
42 manifestations and consequences of that which we now call the colonisation of the street by
43
44 formal organizations and the increasingly street-like appearance of formal organizations. For
45
46 example, if the street can indeed act as a mode of organizing, organizational scholars should
47
48 ask whether this mode of organizing also enters organizations when they become more street-
49
50 like in terms of their aesthetics and spatial layout.

51
52
53
54
55 Moreover, while some scholarship has examined high-skilled employees' mobility and
56
57 experiences of disorientation as a result of working in transit (Costas, 2013), this research has
58
59 focused mostly on non-places (e.g., airports and stations), which typically convey a generic
60

1
2
3 atmosphere and aesthetic. By contrast, research into workers-on-the-go might specifically
4 investigate the role of the street in their rhythms and experiences of work, as well as looking
5 not only at elite, but also at precarious and/or low-skilled mobile workers and the darker side
6 of street business.

16 **Researching on and with the Street**

17
18 To present our suggestions for research at the intersection of organizations, organizing, and the
19 street in a more structured and extensive manner, we now offer an example of a performance
20 art piece that the first author attended. We chose this piece, which took place on the street, as a
21 means of illustrating the different tensions that may be identified in the intersection between
22 street, organization, and organizing. These tensions are each related to the first observation that
23 the street, as setting and as concept, is characterised by formal, as well as informal, elements.
24 Identifying these tensions, with the help of our short example, will help us to suggest ways in
25 which organization scholars can engage with the street, which we believe offers ample
26 methodological and epistemological opportunity. To this, we will propose an agenda with
27 research questions and designs for organizational scholars. Rather than designing a typology
28 that is intended to capture reality, these tensions are aimed at orienting the reader and linking
29 our observations to well-established discussions in organization studies, pertaining to issues of
30 structure (formal/informal), practice (routine/improvisation), and experience
31 (presence/absence).

48
49
50

51 The performance piece in question, entitled HOME, was created by Hilde Tuinstra, a
52 artist active in the Netherlands and Germany. HOME consisted of a theatrical audio-tour around
53 Buikslotermeerplein in Amsterdam, a large square next to a shopping centre in a traditionally
54 working-class area in the city's northern district. Tuinstra worked on this project for over a
55 year, engaging in a type of artistic ethnography with the neighbourhood immediately
56
57
58
59
60

1
2
3 surrounding the shopping centre. During this time, she was interested in the upcoming changes
4 that the neighbourhood was about to experience. In particular, the long-anticipated construction
5 of a new underground train line offering Amsterdam's northern district a much quicker
6 connection not only to the city centre but also to the city's financial district.
7
8
9
10
11
12

13 HOME can be seen as both performance art and participatory art. To offer some brief
14 background: in the fields of fine art and theatre, the 1960s and 1970s witnessed a movement
15 that mimicked, or led, the much wider-spread need for democratisation of public institutions.
16 Much like the student protests, many artists no longer wished to cater to the demands of what
17 they felt were hermetic and hierarchic institutions, and took their practice outside, sometimes
18 to the streets.
19
20
21
22
23
24
25
26

27 Furthermore, bringing artistic work into the ongoing flows and interactions of everyday
28 life is often recognised as having political potential because it offers people the possibility of
29 adopting a new perspective (Mairesse, 2014). According to Rancière (2000), aesthetical
30 practices and judgements are always political, because they promote an order or a hierarchy of
31 valuation (see also Steyaert & Hjorth, 2002). Aesthetics are thus also capable of challenging
32 existing orders, and can be used productively in protests and social movements (Bassett, 2014)
33 as well as in other interventions in existing organizational contexts (Mairesse, 2014;
34 Papastergiadis, 2014). Hence, we should ask not what certain artworks are, but rather what they
35 do (Deutscher, 2000). Here, art can be understood as a system of action (Gell, 1998) and an
36 affordance for social encounters or individual contemplation (Tygstrup, 2017). This, to our
37 minds, offers clues to the potential benefits (and the potential pitfalls) of taking the organization
38 outside.
39

44
45
46
47
48
49
50
51
52
53
54

55 The example of Tuinstra's performance discloses a set of tensions that exist in the street
56 and disrupt the flow of work and organizing in ways that invite theorising and, for a start, a set
57 of research questions. Put briefly, these tensions cohere around formal versus informal
58
59
60

1
2
3 organization, routine versus improvisation, and presence versus absence. Let us begin with how
4
5 HOME relates to the question of formal versus informal organization.
6
7

8
9 Taking part in this experience, the participants gathered in a pop-up cultural venue
10 located in a former Chinese restaurant. It was a Saturday afternoon in December, and very cold
11 by local standards. The participants, including the first author, were given headphones and the
12 group of around twenty people headed outside. Each of them was immersed in the beautiful
13 soundscapes that they heard through our individual headphones, yet they also had to coordinate
14 their actions, as they had to walk from one point to the next. Although instructions were given,
15 visual clues and gestures were used among the participants to encourage one another to move
16 along. At different points, local residents performed their autobiographies through a
17 combination of pre-recorded and well-timed storytelling, and a performance by the person in
18 question, often in silence and at a distance. The combination of the intimate story and the
19 distant, but visually impressive, bodily postures enhanced the participants' awareness of their
20 own presence. How were they walking, standing, sitting? How did their own actions shape the
21 situation? Should they surrender to the dramaturgical precision of sound, story, and sight, or
22 should they interrupt the scripted instructions and say something in response?
23
24

30
31
32
33
34
35
36
37
38
39
40

41 Furthermore, for HOME, Tuinstra collected stories and biographies from local residents
42 who reflected on the neighbourhood, its changes, and their personal connections to it. When
43 the first author met the artist, she was in the midst of this process, and going into a café located
44 on the aforementioned square meant running into at least several informants. Embedded in the
45 local tapestry, the artist continuously opened herself up to unplanned encounters. She began to
46 inhabit an unknown environment and positioned herself as an inquisitive newcomer, rather than
47 a performer or creator. Typical of this kind of art, she was open to incorporating everything that
48 she encountered into her creative process. In approaching this from a researcher's perspective,
49 it becomes clear that everything can be data. The artist's working process implied conducting
50
51
52
53
54
55
56
57
58
59
60

1
2
3 an in-depth investigation into an environment that was open and undefined. Tuinstra finally
4 constructed a multi-media theatrical tour around the neighbourhood. The artwork can thus be
5 seen as consisting of both the experience that Tuinstra eventually offered her audience and the
6 research and social ties that were created along the way. The artwork plays with the tension of
7 routine versus improvisation.
8
9
10
11
12
13
14

15 Via the headphones, the participants in HOME were present in the immediate physical
16 environment and enveloped in a virtual world. The feeling was comparable to the sensation of
17 navigating the street while listening to one's favourite music: wrapped in a solitary blanket of
18 private sounds, yet utterly enchanted with the surrounding world. At some moments, it seemed
19 as though the music was telling the story of the trees, cars, and people passing by; your thoughts
20 are your own, but they are amplified by the immediate uniqueness of this moment, this place.
21 The music may be interrupted by a call that streams through the same headphones and enters
22 your personal space. Should you respond to this immediate demand, or remain encapsulated in
23 the moment? When you leave your house or place of work to attend a meeting, do you stop to
24 look at graffiti signs, or do you travel in an uninterrupted straight line, as if traversing a void?
25 Encounters with strangers may pull you out of your thoughts and into the here and now of
26 ordering something or responding to a request for directions. These questions relate to the
27 tension of presence versus absence that often characterises work and communication on mobile
28 devices while in transit.

50 **Taking Organization Studies to the Street**

51 We propose that the street is not merely a setting for research, nor an object, but argue that it
52 has value as a methodological and epistemological device, and wish to offer several directions
53 for conducting research on and with the street. The street has long been a site and a mode of
54 organizing. Furthermore, formal organizations are increasingly intertwined with street life, as
55
56
57
58
59
60

1
2
3 we argued above. Not only do mobile technologies facilitate working in transit, but the interiors
4
5 of organizations have acquired street-like aesthetics: large glass windows, imitations of graffiti
6
7 pieces, and open spaces bring the atmosphere of urban space inside. The street is an empirical
8
9 setting of shifting and hybrid roles of production, and research on phenomena outside of—or
10
11 predated—the grand theories in management and organization science (von Krogh, Rossi-
12
13 Lamastra, & Haefliger, 2012) provides an opportunity to revisit these theories (Bamberger,
14
15 2018).
16
17
18
19

20 Navigating the tension between formal and informal structures, individuals can explore
21
22 various paths of consuming and producing, earning and spending. Hence, organization scholars
23
24 may study the street as a location for novel forms of crowd-based organizing (Majchrzak,
25
26 Griffith, Reetz & Alexy, 2018) and liquid consumption (Ritzer & Jurgenson, 2010; Bardhi and
27
28 Eckhardt, 2017). For example, people come up with ideas, set up shop, or review products with
29
30 a few touches on the screens of their smartphones while on the go. For knowledge workers with
31
32 flexible work hours and locations, mobile information technology and improvements in public
33
34 transport are turning the street into a more attractive place to work, away from boredom and
35
36 amidst the flow of public life, fresh encounters, and better coffee. At the same time, particularly
37
38 in western cities, the street and its adjacent spaces are carefully planned and monitored. When
39
40 do we amend space and make it our own? Structures can be subverted and practices may follow
41
42 a straight path or take a detour. We must study and reflect on the situatedness of these modes
43
44 of connecting and interacting, and conceptualise these as aspects of organizations that happen
45
46 beyond the traditional temporal and spatial boundaries.
47
48
49
50
51

52 The performance piece HOME helps to exemplify the different ways in which the street
53
54 is relevant to the empirical and conceptual understanding of organizing and organization. The
55
56 street is both formal and informal, and allows for both routine and improvisation. Being in
57
58 different types of urban space, with different purposes in mind (transit, leisure, or work), is
59
60

1
2
3 conducive to different types of experience, which are increasingly mediated through various
4 modes of connectivity.
5
6

7
8 In conclusion, we believe that exploring the street helps understand some of the tensions
9 pertaining to, and constituting, work and organizing processes today. Planned routes with room
10 for adjustment, well-established practices for co-existence with the possibility of surprises
11 (good or bad), and a continuous oscillation between presence and absence through mobile
12 device use, all make the street a setting that exemplifies the issues and phenomena relevant to
13 organization studies.

59 Author biographies

60

1
2
3 **Boukje Cnossen** is junior professor of Cultural Entrepreneurship at the Institute of
4 Management and Organization at Leuphana University of Lüneburg, Germany. Her research
5 focuses on organizational space, materiality, and the communicative constitution of
6 organization in the context of the arts and creative industries.
7
8
9
10
11
12

13
14 **François-Xavier de Vaujany** is professor of Management & Organization Studies at PSL,
15 Université Paris-Dauphine and visiting research professor at NYU. His research is focused on
16 the emergence and legitimation of new modes of organizing and new forms of management.
17 His ongoing work explores collaborative practices in open contexts, i.e. offline and online
18 contexts in which true encounters and serendipity happen. His descriptions rely on hermeneutic
19 phenomenologies and experiential perspectives of management and organizing.
20
21
22
23
24
25
26
27
28
29

30 **Stefan Haefliger** is professor of Strategic Management & Innovation at Cass Business School,
31 City University of London. In his research and teaching he focuses on co-creation strategies as
32 well as regulation and organizational design in innovation processes. His current research on
33 technology strategy helps define optimal levels of modularity in product development and the
34 role that machines play in knowledge management. Stefan has written extensively on business
35 models and helps firms devise pathways to co-creation with customers and open innovation.
