Developing and Applying Optoelectronics in Machine Vision

Oleg Sergiyenko and Julio C. Rodriguez-Quiñonez

Developing and Applying Optoelectronics in Machine Vision

Sensor technologies play a large part in modern life as they are present in "security systems, digital cameras, smartphones, and motion sensors. While these devices are always evolving, research is being done to further develop this technology to help detect and analyze threats, perform in-depth inspections, and perform tracking services.

Developing and Applying Optoelectronics in Machine Vision evaluates emergent research and theoretical concepts in scanning devices and 3D reconstruction technologies being used to measure their environment. Examining the development of the utilization of machine vision practices and research, optoelectronic devices, and sensor technologies, this book is ideally suited for academics, researchers, students, engineers, and technology developers.

Topics Covered:

- 3D Imaging Systems
- Automated Systems
- Facial Recognition
- Laser Scanners
- Optoelectronic Devices
- Sensor Technologies
- Spatial Coordinate Measurement

COVERAGE

While intelligence is traditionally a term applied to humans and human cognition, technology has progressed in such a way to allow for the development of intelligent systems able to simulate many human traits. With this new era of simulated and artificial intelligence, much research is needed in order to continue to advance the field and also to evaluate the ethical and societal concerns of the existence of artificial life and machine learning.

The **Advances in Computational Intelligence and Robotics (ACIR) Book Series** encourages scholarly discourse on all topics pertaining to evolutionary computing, artificial life, computational intelligence, machine learning, and robotics. ACIR presents the latest research being conducted on diverse topics in intelligence technologies with the goal of advancing knowledge and applications in this rapidly evolving field.

MISSION

- Computational Intelligence
- Evolutionary Computing
- Algorithmic Learning
- Robotics
- Artificial Intelligence
- Artificial Life
- Synthetic Emotions
- Computational Logic
- Natural Language Processing
- Adaptive and Complex Systems
